

Instrumentation GDD Inc. celebrates 40 years of innovation and success!

On Friday, August 4, Instrumentation GDD Inc. (GDD) celebrated its 40th anniversary in the presence of its three founders, Edwin Gaucher, Réjean Desbiens and Régis Desbiens. It was a festive event and, moreover, a reunion for its founders and employees (previous and new) who have been part of the GDD adventure for the last 40 years. All were pleased to share their respective experience within the company and could visualize all the progress in geophysical instrumentation design from yesterday to today.

With its successful geophysical inventions and its dynamic team, GDD has established a world leading reputation in mining exploration. This achievement is based both on the innovative instrument design and after-sales service. Since its inception, the company has been able to keep its course despite a very competitive market in addition to the ups and downs of the industry. Today, GDD has three departments, each equally important, customer service, production and research and development.

It goes without saying that we still wish for many years of innovation and success.
