

Get the most out of your dataset with the **IP Post-process Software** & **GPS synchronization!**

With GDD Resistivity/IP instruments and new **IP Post-Process software**, save time, money and avoid re-surveying.

For an In-depth analysis of your IP data:

- Visualize the fullwave (from *.fullwave or *.MEM files)
- Improve your apparent resistivity using real-time current
- Fine-tune synchronization, change your windows scheme, discard noisy data...
- Look at the resulting Pseudosections

Now with the EM-IP Tx Controller and IP GPS synchronization,
you'll get the most accurate and enhanced survey results!
